The Rule of Law in Belize

Key Findings from the General Population Poll 2021
Acknowledgements

The Rule of Law in Belize: Key Findings from the General Population Poll 2021 was produced by the World Justice Project under the research oversight of Alejandro Ponce and the executive direction of Elizabeth Andersen.

The production of this report was led by Ana María Montoya and Tanya Primiani. This report was prepared by Lindsey Bock, Erin Campbell, Ana Cárdenas, James Davis, Giacomo D’Urbano, Nora Futtn, Verónica Jaso, Karelle Matchum, Ana María Montoya, Sahar Omer, Tanya Primiani, Hannah Rigazzi, Natalia Rodríguez Cajamarca, Victoria Thomaides, Marcelo Torres, and Juan Felipe Quimbay Velásquez.

Courtney Babcock, Abigail Broussard, and Mariana Lopez were the graphic designers for this report.

Photo for cover provided by Meritt Thomas via UnSplash.

Sampling, fieldwork, and data processing in El Salvador, Belize and Panama were conducted by CID Gallup, based in Costa Rica. Data collection in Guatemala and Honduras was conducted by Mercaplan, based in Honduras.

Scripting of the questionnaire in the online platform SurveyToGo was conducted by Ezekiel Agwata of Polar Solutions.

The findings in this report are taken from the General Population Poll (GPP) conducted for the World Justice Project in 2021. The GPP’s conceptual framework and methodology were developed by Mark David Agrast, Juan Carlos Botero, and Alejandro Ponce. The methodology for this iteration of the GPP was developed by Lindsey Bock, Ana Cárdenas, Nora Futtn, Amy Gryskiewicz, Verónica Jaso, Ana María Montoya, Alejandro Ponce, Eréndira González Portillo, Tanya Primiani, Natalia Rodríguez Cajamarca, Victoria Thomaides, and Marcelo Torres.

This report was made possible with the support of the U.S. Department of State’s Bureau of International Narcotics and Law Enforcement Affairs’ Office of Western Hemisphere (INL). The views expressed in this report are those of the survey respondents and do not necessarily represent the views of INL.

About This Report
About This Report

EFFECTIVE RULE OF LAW reduces corruption, combats poverty and disease, and protects people from injustices large and small. Strengthening the rule of law is an important objective for governments, donors, and civil society organizations around the world. To be effective, rule of law development requires clarity about the fundamental features that define the rule of law, as well as an adequate basis for its evaluation and measurement.

The Rule of Law in Belize: Key Findings from the General Population Poll 2021 presents question-level data drawn from the General Population Poll (GPP), an original data source designed and collected by the World Justice Project. To provide a more in-depth view of trends in perceptions of rule of law in Belize, this report also presents select findings over time and compared to Belize’s regional peers in Central America.

This report represents the voices of people in Belize and their experiences with the rule of law in their country.

The GPP was conducted in November of 2021 through face-to-face interviews to a nationally representative sample of 2,004 Belizean households. This poll was designed to capture data on the experiences and perceptions of ordinary people regarding a variety of themes related to the rule of law.

The data derived from the General Population Poll is presented in this report as thematic briefs, each one highlighting a different dimension of the rule of law from the perspective of Belizeans. These thematic briefs focus on the current rule of law ecosystem in Belize while simultaneously illuminating changes over time and comparisons across the following regional peer countries: El Salvador, Guatemala, Honduras, and Panama. Each section touches upon perceptions of the following themes: accountability, fundamental freedoms, corruption, bribery victimization, trust in institutions, the criminal justice system and its actors, police performance, community policing, vigilante justice, crime victimization, support for victims of crime, gender issues, security, and migration.
Executive Findings

The Rule of Law in Belize: Key Findings from the General Population Poll 2021 report provides a comprehensive overview of how citizens perceive and experience the rule of law in Belize. The thematic briefs summarized below draw on historical data and new data collected from the general public in 2021. Despite improvements in certain rule of law outcomes over time, the results highlight the fact that many challenges—including lack of accountability, bribery victimization, and police performance—persist.

Section 1: Accountability and Fundamental Freedoms

1 GOVERNMENT ACCOUNTABILITY
Belizeans have more pessimistic views on government accountability than respondents from regional peer countries. Only 22% of Belizean respondents believe that a high-ranking government official would be prosecuted and punished if they were to embezzle public funds for personal benefit, while this figure ranged from 38% to 51% in regional peer countries. Beliefs regarding checks on executive power have remained mostly stable in Belize, with 70% of respondents stating that they believe the prime minister should always obey laws and court decisions, even if they think they are wrong (73% of respondents reported the same in 2019).

2 FUNDAMENTAL FREEDOMS
When it comes to guarantees of fundamental freedoms, Belizeans have mixed views. Belizeans believe that all dimensions of the freedom of expression have improved since 2019. Respondents have relatively positive views about their right to participate in political processes, despite some declines since 2017. In contrast, Belizeans hold more critical views on electoral freedoms, with only 59% reporting that they believe local government officers are elected through a clean process. While three out of four Belizeans agree that religious freedoms are effectively guaranteed, the percentage of respondents who believe that religious minorities can observe their holy days fell from 93% in 2017 to 75% in 2021.

3 CORRUPTION
Perceptions of corruption in Belize improved across all institutions between 2019 and 2021. Belizeans believe that members of the National Assembly are the most corrupt, with half (50%) of respondents reporting that most or all members of the legislative branch are involved in corrupt practices. Police officers are perceived to be the second most corrupt,
with 45% of respondents reporting that most or all police officers are involved in corrupt practices. Belizeans believe the judiciary is the least corrupt institution, with roughly one-third of respondents believing most or all prosecutors (35%), public defense attorneys (32%), and judges and magistrates (29%) are corrupt. While their perceptions have varied since 2013, respondents believe levels of corruption are lower in every institution since 2019.

4 BRIBERY VICTIMIZATION
Belizeans generally pay bribes more frequently than respondents in regional peer countries. In the last three years, Belizeans reported paying bribes most often to request a government permit or document (27%) or to obtain a birth certificate or government-issued ID (25%). The only instance in which respondents from a regional peer country reported a higher bribery victimization rate was when requesting public benefits or assistance: 12% of Belizeans reported paying bribes to access public benefits or assistance, compared to 21% of Panamanians and 13% of Hondurans.

5 TRUST
Despite improvements since 2017, Belizeans have low levels of trust in the public and state institutions. Less than half of the respondents in Belize (48%) reported having some or a lot of trust in people living in their community, followed by 42% trusting judges and magistrates and 40% trusting public defense attorneys. Fewer than 40% of Belizeans express at least some trust in national and local government officers and only 35% of Belizeans report trusting police officers. That being said, perceptions of trust across these groups have sustained improvements in Belize since 2017.

Section 2: Police and Criminal Justice

6 CRIMINAL JUSTICE SYSTEM
Belizeans report higher levels of confidence in all dimensions of the criminal justice system than in 2018, though timeliness continues to be a top issue. Over half of the respondents in Belize are confident that the criminal justice system provides equal service regardless of where people live (57%), ensures equal treatment of victims (56%), and safeguards the presumption of innocence (56%). In both 2018 and 2019, Belizeans reported the lowest levels of confidence in the criminal justice system’s ability to deal with cases promptly and effectively (30% in 2018 and 44% in 2021), though this figure has improved.

7 CRIMINAL JUSTICE ACTORS
Belizeans have mixed views on key criminal justice actors. Belizeans reported having the highest levels of trust in judges and magistrates, with 42% of respondents reporting that they have at least some trust in them, followed by public defense attorneys (40%) and prosecutors (36%). Despite these low levels of trust, only 29% of respondents believe that most or all judges and magistrates are involved in corrupt practices, followed by public defense attorneys (32%) and prosecutors (35%). Over half of Belizean respondents believe that judges, magistrates, and prosecutors do their job well, while only 40% of Belizeans believe that public defense attorneys do their job well.

8 POLICE
Police Perceptions
Belizeans have moderate perceptions of police performance. Over half of Belizeans believe that the police resolve security problems in their community (64%), serve the interests of their community (60%), and serve the interests of regular citizens (58%). Meanwhile, only 43% of respondents believe that the police respond to crime reports and perform effective and lawful investigations. Additionally, while most Belizeans (68%) believe that the police treat all people with kindness and respect, only 47% of respondents believe that the police do not use excessive force.

Over half (55%) of Belizean respondents believe both that the police are not involved in corrupt practices and that they investigate crimes in an independent manner. Perceptions on police accountability in Belize are generally lower, with only 35% of respondents reporting that they believe that the police are investigated for misconduct and only 36% reporting they believe that the police are held accountable for seeking bribes. Just over one-third (35%) of respondents reported that they trust the police.
Police Interactions

Belizeans tend to have more positive perceptions of the police during voluntary interactions as opposed to involuntary interactions. Nineteen percent of Belizean respondents voluntarily contacted the police in the last 12 months. Of those respondents, 32% were reporting a crime or requesting help or information. Most respondents who contacted the police felt that the police controlled the situation (61%) and that the police listened to them (83%) during the interaction.

Nearly a quarter (24%) of Belizean respondents reported having had an involuntary contact with the police in the last 12 months. Of those who had an involuntary interaction, respondents most frequently reported that they were stopped for a routine check or so that the police could provide assistance (46%). An overwhelming majority (91%) of Belizeans who had an involuntary interaction reported that the police controlled the situation, though only 65% believe that the police had a legitimate reason to stop them.

9 COMMUNITY POLICING, VIGILANTE JUSTICE, AND TRUST

Belizeans who interact more frequently with the police tend to have more trust in the police. Belizean respondents who reported seeing the police more frequently in their neighborhood also reported having higher trust in the police. Conversely, those who reported that the police rarely or never patrol their neighborhood have lower levels of trust in the police, are less likely to believe that the police resolve security problems, and are less likely to believe that police act according to the law. Belizeans who reported feeling unsafe in their neighborhood at night or who think the police are involved in corrupt practices tend to have lower levels of trust and are less likely to believe that the police resolve security problems in their community.

10 CRIME VICTIMIZATION

Fourteen percent of Belizean respondents were a victim of at least one crime in the past year. When asked about the crime that they most recently experienced, most respondents reported being a victim of a property crime (10%), followed by crimes against life and integrity (8%) and corruption, financial, and commercial crimes (3%). Of the respondents who were victims of crime, only 44% reported the crime and, of those, 75% filed an official crime report. The most common reason listed by Belizeans for not reporting the crime was the belief that reporting would not help (39%). In Belize, men, people who are financially secure, and individuals in urban areas were victims of crime more often than other demographic groups in 2021. The frequency of crime reporting was lowest among women, financially secure individuals, and respondents from urban areas.

11 VICTIM SUPPORT

Most Belizeans are not confident that crime victims receive adequate resources and protection. A minority of respondents in Belize believe crime victims receive effective and timely medical attention (36%), receive information and legal advice when going to the authorities (38%), or are believed when they report a crime (39%). Respondents are more confident that crime victims are addressed by the police using accessible language (58%) and that crime victims are guaranteed their rights in criminal justice proceedings (52%).
Section 3: Gender, Security and Migration

12 GENDER ROLES AND DOMESTIC VIOLENCE
Belizean men and women have similar opinions about family roles, though views toward domestic violence differ. Both men (87%) and women (84%) agree that a man should be responsible for all of his family’s expenses. The largest difference between men and women’s opinions on gender roles is evident in their beliefs on childrearing, with 37% of men and 30% of women agreeing that women who work outside of their home neglect their children. When asked what actions respondents would take in response to domestic violence from a partner, 29% of men and 35% of women said that they would call the police. Only 8% of men said that they would hit their partner back and 4% of women said that they would not do anything.

13 SECURITY
Belizeans felt safer in 2021 than in past years and perceptions of safety are generally consistent across most sociodemographic characteristics. Most respondents report feeling safe walking in their neighborhood at night (73%), marking a 27-point increase from 46% of respondents in 2019. The majority of respondents (60%) also reported feeling safe riding the bus. Twenty-two percent of Belizeans believe that the most frequent crime in their neighborhood is gang and youth violence, followed closely by street violence (21%) and domestic violence against women (17%). Belizeans who were previously a victim of a crime and/or do not have a high school diploma are slightly less likely to feel safe or very safe while walking in their neighborhood at night than respondents with other sociodemographic characteristics.

14 INTERNAL MIGRATION
Twenty-eight percent of respondents in the cities of San Ignacio and Santa Elena reported having migrated there from another city in Belize. Fewer respondents reported having migrated to either Belize City (14%) or Belmopan (10%). In Belize City and Belmopan, most respondents reported better economic or educational opportunities as their reason for migration, whereas in San Ignacio and Santa Elena, the highest reported reason for migrating was family reasons. Respondents who are financially insecure are more likely to have migrated within Belize.

15 INTERNATIONAL MIGRATION
One in five Belizeans would prefer to move permanently to another country. However, only 10% of respondents reported having made plans to move internationally in the next 12 months. Twenty-two percent of respondents from San Ignacio and Santa Elena would prefer to move to another country, while respondents from Belmopan are the most likely to have had made plans to move internationally in the subsequent 12 months. Across all cities, the most common reason behind a desire to migrate was better economic or educational opportunities. Respondents who are younger than 30, have previously attempted to move to the United States, have been a victim of a crime in the last 12 months, and/or are financially insecure are more likely to have made plans to move internationally.

16 MIGRATION TO THE UNITED STATES
Ten percent of Belizeans have attempted to migrate to the United States. The majority (60%) of respondents who attempted to enter the United States were successful. Of that group, the most common reason for leaving the US was family or social reasons (32% of respondents chose this option), while 23% said they had changed their mind. Forty percent of respondents who reported having attempted to migrate to the United States did not end up entering the country. Of those, 44% were unable to enter because they did not receive correct permits or visas, 27% did not enter because they changed their mind, and 14% did not enter because they ran out of funds.

Victim Support
Views on support for crime victims in Belize.

Chart 11. Perceptions of the Treatment of Crime Victims
Percentage of respondents who are confident that crime victims...

- 36% Receive effective and timely medical and psychological care
- 38% Receive information and legal advice when going to the authorities
- 44% Receive protection from the police if their safety is in danger
- 43% Receive protection during criminal proceedings to prevent repeat victimization
- 43% Are believed when they report a crime
- 40% Receive adequate care and protection as victims of sexual crimes
- 52% Are guaranteed their rights in criminal justice proceedings
- 58% Are addressed by the police using accessible language
- 48% Receive a clear explanation of the process when reporting a crime to the police
- 41% Receive adequate care and protection as victims of domestic violence

Note: For additional information on how Chart 11 was produced, please see the Appendix.

Section 3
Gender, Security, and Migration

27  Gender Roles and Domestic Violence
28  Security
30  Internal Migration
31  International Migration
33  Migration to the United States
Gender Roles and Domestic Violence

Perceptions of roles within the family and hypothetical reactions to situations of domestic violence.

Chart 12a. Attitudes Towards Gender Roles in Belize by Gender
Percentage of respondents who agree with the following statements

- Women who work outside of the home neglect their children
- Women should be responsible for the care of children, sick people, and the elderly
- Women should be as responsible as men for bringing money home
- A man should be responsible for all his family’s expenses

Chart 12b. Hypothetical Reactions to Domestic Violence by Gender
Percentage of respondents who, if their partner were to physically assault them, would...

- Try to talk to their partner
- Seek advice from someone else
- Not do anything
- Kick their partner out of the house
- Hit their partner back
- Get divorced or separated
- File a complaint
- Call the police

Project Design
Methodology

To present an image that accurately portrays the rule of law as experienced by ordinary people, data in this report is drawn from the General Population Poll (GPP), an original data source designed and collected by the World Justice Project (WJP). The GPP captures the experiences and perceptions of ordinary citizens concerning the performance of the state and its agents and the actual operation of the legal framework in their country.

The General Population Poll used to collect data in Central America in 2021 features three new modules that highlight perceptions on issues salient to the region: Insecurity, Gender Roles, and Migration. In addition, new questions measuring the acceptance of vigilante justice, police performance, and prevalence of community policing were added to existing modules. In total, the General Population Poll questionnaire includes 124 perception-based questions and 85 experience-based questions, along with sociodemographic information on all respondents. Additionally, the GPP in Central America was administered to a sample ranging from 2,000 to 3,000 in Belize, El Salvador, Guatemala, Honduras, and Panama. Historically, the GPP was administered to a sample of 1,000 respondents in these countries.

Data Collection

The GPP in Belize was conducted for the WJP’s The Rule of Law in Belize: Key Findings from the General Population Poll 2021 with sampling, fieldwork, and data processing by CID Gallup, based in San José, Costa Rica. CID Gallup administered the surveys in November 2021, conducting face-to-face interviews using a multi-stage random sampling design. The target population group for this survey included Belizeans aged 18 years or older residing across all 6 districts of the country.

SAMPLING SIZE AND SAMPLING FRAME

The General Population Poll in Belize represents an achieved total sample size of 2,004 interviews distributed proportionally across all 3 regions. CID Gallup based the sampling frame on the 2010 Belize Population Census, acquiring a proportionally stratified sample by department, age, gender, socioeconomic status, and level of urbanization.

In order to address all relevant topics while controlling the questionnaire length, the World Justice Project split three of the survey modules into two versions (Option A and Option B) and randomly assigned one option to each respondent for each module. These modules included: Hypothetical Situations, Civic Participation, and Institutional Performance. Aside from these modules, the questionnaires are identical. The complete survey instrument, in English and Spanish, can be found in the Appendix of this report.

Challenges to data collection in Belize included the ongoing COVID-19 pandemic and the survey’s length.

Interviewing and Quality Control

In total, 40 interviewers worked on this project, including 24 female interviewers. Enumerators worked in ten groups of four interviewers with one supervisor per group. Interviews were conducted in English.

The supervisory team directly oversaw 43% of interviews in the field. During data processing, 36% of the interviews were selected for audio validation. After quality control, 56 interviews were rejected from the final sample. Additional quality control measures included GPS validation of all sampling segment interviews, checks for abnormal interview length, and review of audio quality. Interviews averaged 55 minutes in length and ranged from 38 to 99 minutes.

Data Review and Justification

Prior to data collection in Central America, the World Justice Project team conducted background research on the following thematic topics in order to adapt the General Population Poll to the Central American context: interactions with the police, perceptions of the police, police abuse, discrimination, violence against women and intimate partner violence, and migration. In addition, the team conducted research on rule of law trends and issues within each country studied and monitored current events before, during, and immediately after the data collection process.

As part of the data analysis process, the team consulted both this background research and several third-party sources in order to contextualize and validate perceptions-based data captured by the General Population Poll and compare it with the objective rule of law situation in-country. Peer data sources consulted include select indicators measured by the Latin American Public Opinion Project (LAPOP)’s AmericasBarometer, LatinoBarómetro, Varieties of Democracy (V-Dem), Transparency International’s Corruption Perceptions Index, the Bertelsmann Stiftung’s Transformation Index (BTI), and Freedom House’s Freedom in the World. While certain trends captured by the 2021 General Population Poll in Belize are comparable to trends in perceptions data measured by other indices, the experiences and perceptions presented in this report may not always coincide with the reality of Belize’s rule of law performance.

Description of the Sample

**Coverage:** Interviews were distributed across regions to create a nationally representative sample. The majority of interviews were conducted in the Southern region (43%), followed by the Metro region (29%) and Northern region (28%).

**Geography:** Fifty-four percent (54%) of respondents reside in rural towns and villages and 46% of respondents reside in metro areas or cities.

**Ethnicity:** Most respondents identified themselves as Mestizo (57%), followed by Creole (24%) and Indigenous (8%).

**Gender:** Fifty-one percent (51%) of respondents were female and 49% were male.

**Education:** Forty-one percent (41%) of respondents (41%) reported that they had received at least a high school diploma or vocational degree, and the remaining 59% of respondents received a middle school diploma or less.
Historical Data
Historical data in this report derives from the *WJP Rule of Law Index®*’s General Population Poll that is administered every two to three years using a nationally representative probability sample of 1,000 respondents. These household surveys were administered in the three largest cities of most countries until 2018, when the World Justice Project transitioned to nationally representative coverage as the preferred methodology for polling. The historical polling data used in this year’s reports was collected in the following intervals: Data for Belize and Honduras was collected during the fall of 2019, 2017, and 2014. Data for Panama was collected during the fall of 2019, 2017, 2014, and 2012. Data for El Salvador and Guatemala was collected during the fall of 2018, 2016, and 2013.

Additional Countries
This report includes comparisons to the following Central American countries surveyed by the World Justice Project during the same period: Belize, Guatemala, Honduras, and Panama. Together, these five countries are a portion of the 139 countries and jurisdictions included in the *WJP Rule of Law Index 2021* report.* Detailed information regarding the methodology of the Rule of Law Index is available at: [www.worldjusticeproject.org](http://www.worldjusticeproject.org).

*Due to the staggered timelines of data collection for the *World Justice Project Rule of Law Index 2021* (polling started in the fall of 2020 and concluded in the summer of 2021) and data collection for the General Population Poll in Central America (polling took place in the fall of 2021), the data collected in Central America is not included in the *WJP Rule of Law Index 2021*.

About the World Justice Project

THE WORLD JUSTICE PROJECT (WJP) is an independent, multidisciplinary organization working to create knowledge, build awareness, and stimulate action to advance the rule of law worldwide. Effective rule of law is the foundation for communities of justice, opportunity, and peace—underpinning development, accountable government, and respect for fundamental rights.

The WJP builds and supports a global, multidisciplinary movement for the rule of law through three lines of work: collecting, organizing, and analyzing original, independent rule of law data, including the World Justice Project Rule of Law Index®; supporting research, scholarship, and teaching about the importance of the rule of law, its relationship to development, and effective strategies to strengthen it; and connecting and building an engaged global network of policymakers and advocates to advance the rule of law through strategic partnerships, convenings, coordinated advocacy, and support for locally led initiatives.
