Variables Used to Construct the WJP Rule of Law Index® 2021

This table lists the individual variables used to construct the factors of the WJP Rule of Law Index. The table consists of four columns. The first column lists the variable's identification number. The second column lists the individual questionnaires in which a variable was included. For variables included in the Qualified Respondents' Questionnaires (QRQ), the following abbreviations are used: CC for the Civil and Commercial Law questionnaire, CJ for the Criminal Law questionnaire, LB for the Labor Law questionnaire, and PH for the Public Health questionnaire. The third column lists the qualitative and quantitative scales for each variable. The fourth column states the survey text of the variable. The formulas used to calculate the sub-factors, factors, and the WJP Rule of Law Index are presented next to each composite indicator.

Note: Each question included in the GPP and QRQ surveys includes the option to respond with "Don't know" or "No answer." Because incidents of these responses are excluded from Index calculations, they are not included in the following table.
