Project

The Rule of Law in Honduras

Key Findings from the General
Population Poll 2022

Acknowledgements

The Rule of Law in Honduras: Key Findings from the General Population Poll 2022 was produced by the World Justice Project under the research oversight of Alejandro Ponce and the executive direction of Elizabeth Andersen.

The production of this report was led by Ana María Montoya and Tanya Primiani. This report was prepared by Said Aarji, Erin Campbell, James Davis, Joshua Fuller, Skye Jacobs, Ana María Montoya, Santiago Pardo González, Enrique Paulin, Tanya Primiani, Hannah Rigazzi, Natalia Rodríguez Cajamarca, Jeison Sabogal Sánchez, Victoria Thomaidés, Carlos Toruño Paniagua, and Moss Woodbury.

Mariana Lopez was the graphic design lead for this report, with support from Raquel Medina. Photo for cover provided by Héctor Emilio González via UnSplash.

Sampling, fieldwork, and data processing in Honduras and Guatemala were conducted by Mercaplan, based in Honduras. Data collection in Belize, Costa Rica, El Salvador, Nicaragua, and Panama was conducted by CID Gallup, based in Costa Rica. Scripting of the questionnaire in the online platform SurveyToGo was conducted by Ezekiel Agwata of Polar Solutions.

The findings in this report are taken from the General Population Poll (GPP) conducted for the World Justice Project in 2022. The GPP's conceptual framework and methodology were developed by Mark David Agrast, Juan Carlos Botero, and Alejandro Ponce. The methodology for this iteration of the GPP was developed by Lindsey Bock, Ana Cárdenas, Alicia Evangelides, Joshua Fuller, Nora Futtner, Amy Gryskiewicz, Verónica Jaso, Ana María Montoya, Alejandro Ponce, Eréndira González Portillo, Tanya Primiani, Hannah Rigazzi, Natalia Rodríguez Cajamarca, Victoria Thomaidés, and Marcelo Torres.

This report was made possible with the support of the U.S. Department of State's Bureau of International Narcotics and Law Enforcement Affairs' Office of Western Hemisphere (INL). The views expressed in this report are those of the survey respondents and do not necessarily represent the views of INL.

ABOUT THIS REPORT

5 About This Report

6 Executive Findings

ABOUT THIS REPORT

EFFECTIVE RULE OF LAW reduces corruption, combats poverty and disease, and protects people from injustices large and small. Strengthening the rule of law is an important objective for governments, donors, and civil society organizations around the world. To be effective, rule of law development requires clarity about the fundamental features that define the rule of law, as well as an adequate basis for its evaluation and measurement.

The Rule of Law in Honduras: Key Findings from the General Population Poll 2022 presents question-level data drawn from the General Population Poll (GPP), an original data source designed and collected by the World Justice Project. To provide a more in-depth view of trends in perceptions of rule of law in Honduras, this report also presents select findings over time and compared to Honduras' regional peers within the Central American subregion of Latin America and the Caribbean.

The GPP was conducted between November 2022 and January 2023 through face-to-face interviews to a nationally representative sample of 2,000 Honduran households. This poll was designed to capture data on the experiences and perceptions of ordinary people regarding a variety of themes related to the rule of law.

This report represents the voices of people in Honduras and their experiences with the rule of law in their country.

The data derived from the General Population Poll is presented in this report as thematic briefs, each one highlighting a different dimension of the rule of law from the perspective of Hondurans. These thematic briefs focus on the current rule of law ecosystem in Honduras while simultaneously illuminating changes over time and comparisons across the following peer countries in the Central American region: Belize, Costa Rica, El Salvador, Guatemala, Nicaragua, and Panama. Each section touches upon perceptions of and attitudes towards the following topics: accountability, authoritarianism, fundamental freedoms, corruption, bribery victimization, trust in institutions, the criminal justice system and its actors, police performance, crime victimization, support for victims of crime, security, access to justice, and migration.

EXECUTIVE FINDINGS

The Rule of Law in Honduras: Key Findings from the General Population Poll 2022 provides a comprehensive overview of how citizens perceive and experience the rule of law in Honduras alongside comparative findings across the Central American region. The findings in this report indicate some positive trends in the general public's perspective on the rule of law in Honduras, including improvement in perceptions of fundamental freedoms and corruption. Despite these positive developments, however, these findings highlight the fact that many challenges—including low levels of trust in institutions, negative views on police performance, and low confidence in victim support practices—persist. At the regional level, prominent trends include deteriorating perceptions of fundamental freedoms, low levels of trust in institutions, and weakened confidence in criminal justice system performance.

SECTION 1

Authoritarianism, Fundamental Freedoms, and Accountability

1. Authoritarianism

On average, roughly half of all respondents in Central America agreed that top government officials engage in authoritarian behavior. Among respondents in Central America, on average, Guatemalans most often felt that top government officials engage in authoritarian behavior and Panamanians least often felt that top government officials engage in authoritarian behavior.

- When asked about authoritarian tendencies in Honduras, respondents most often felt that top government officials **attack or attempt to discredit the media and civil society organizations that criticize them** (55%), **resort to misinformation to shape public opinion in their favor** (54%), and **attack or attempt to discredit the electoral system and other supervisory organs** (50%).
- Compared to their regional counterparts, respondents in Honduras least often felt that top government officials **attack or attempt to discredit opposition parties** (45%).

2. Fundamental Freedoms

On average, fewer respondents believe that their freedoms of expression, political participation, election, and religion are guaranteed in Belize, Guatemala, Nicaragua, and Panama compared to the last year of data collection. In contrast, the average percentage of respondents who believe that these freedoms are guaranteed increased in Costa Rica, El Salvador, and Honduras. Throughout the region, Costa Ricans, on average, most often felt that fundamental freedoms are guaranteed by the state, while Nicaraguans least often felt the same.

- When asked about respect for fundamental freedoms in Honduras, respondents had more favorable views on freedoms of religion and political participation, with 87% of respondents agreeing that **religious minorities can observe their holy days** and **people can attend community meetings**, respectively. Conversely, Hondurans had less favorable views on electoral freedoms, with 47% of respondents agreeing that **local government officials are elected through a clean process**.
- Between 2021 and 2022, Honduras' most significant trends in public opinions on freedoms include improvements in the perceptions that **people can express opinions against the government** (up 11 percentage points) and **civil society organizations can express opinion against the government** (up 9 percentage points).

3. Accountability

Perceptions of accountability in Central America are relatively positive compared to in the rest of Latin America. However, less than half of all respondents in Central American countries believe that high-ranking officials would be held accountable for breaking the law (with the exception of El Salvador, where 51% of respondents believe this to be the case). Respondents in Belize had the most negative perceptions of accountability when compared against regional peers in Central America (only 22% of respondents believe that high-ranking government officials would be held accountable for breaking the law).

- Two-fifths (40%) of Hondurans believe that high-ranking government officials would be held accountable for breaking the law.

SECTION 2

Corruption and Trust

4. Corruption

Public views on the pervasiveness of corruption within the legislature, law enforcement, the executive branch, and the judiciary improved, on average, in El Salvador, Guatemala, Honduras, and Panama, whereas overall perceptions of corruption deteriorated in Belize, Costa Rica, and Nicaragua. Compared to Central American peer countries, El Salvador saw the largest decreases in the percentage of respondents who believe that some or all of the actors across all of these institutions are involved in corrupt practices, while Nicaragua saw the largest increases in the percentage of respondents who believe the same. On average, more Nicaraguans reported perceptions of corruption across all actors than their regional peers in Central America, while Salvadorans reported the same least frequently.

- Perceptions of corruption in Honduras improved most for **national government officers**, with 42% of respondents believing that most or all national government officers engage in corrupt practices in 2022, compared to 52% in 2021.
- **Political parties** are considered the most corrupt institution in Honduras. Approximately 65% of respondents believe that most or all members of Honduran political parties are involved in corrupt practices.
- **Teachers in public schools** are considered the least corrupt actors in Honduras, with 16% of respondents reporting that they believe most or all teachers are involved in corrupt practices.

5. Bribery Victimization

On average, Central American respondents reported paying a bribe most often in Nicaragua and least often in Costa Rica. Throughout the region, respondents most frequently had to pay a bribe when requesting a government permit and least often when using public health services, on average.

6. Trust

Respondents in Central America, on average, trust people living in their community more than any other public actor and trust national government officers the least. On average, respondents in Honduras least often reported having some or a lot of trust across all institutions. In contrast, respondents in El Salvador reported the highest overall levels of trust.

- Levels of trust in Honduras declined across every institution between 2021 and 2022, with the exception of marginal improvement in trust in local and national government officers.
- In 2022, respondents in Honduras most often reported having some or a lot of trust in **people living in their community** (57%) and least often reported having some or a lot of trust in **national government officers** (19%).

SECTION 3

Security and Criminal Justice

7. Crime Victimization

On average, roughly one-quarter (27%) of all respondents surveyed in Central America reported experiencing a crime in the last 12 months. On average, less than half (44%) of those respondents reported their crime experience to an authority.

- Nearly one-third (31%) of Hondurans reported experiencing a crime in the last 12 months, a figure above the regional average (27%).
- Most (64%) Honduran respondents who were victims of a crime did not report the crime to an authority, with those respondents most often citing the belief that reporting would not help as their reason for not reporting (28%), after “Other” (29%).

8. Security

More than half of all Central American respondents feel safe or very safe when walking in their neighborhood at night. Perceptions of safety improved or remained the same in 5 out of 7 Central American countries between 2022 and the last year of data collection, and declined only in Panama and Nicaragua (down 5 and 8 percentage points, respectively). Compared to respondents in regional peer countries, Salvadorans most often reported feeling safe in their neighborhood at night (89%), while slightly more than half of Costa Ricans, Nicaraguans, and Panamanians (52%) reported the same.

- In Honduras, 56% of respondents reported feeling safe walking in their neighborhood at night in 2022.
- Honduran women and Hondurans who had previously been a victim of a crime were less likely to feel safe walking in their neighborhood at night than respondents with other sociodemographic characteristics.

9. Criminal Justice

Throughout Central America, respondents are most confident that the criminal justice system safeguards the presumption of innocence and least confident that the criminal justice system ensures timeliness, on average. Respondents in El Salvador reported the highest levels of confidence in the criminal justice system overall, while respondents in Honduras reported the lowest levels of confidence. Average perceptions of the criminal justice system's overall performance deteriorated in 4 out of 6 Central American countries, while respondents in Costa Rica and El Salvador expressed more positive views on every function between 2022 and the last cycle of data collection.

- Hondurans were most confident that the criminal justice system **ensures equal treatment of the accused (48%), safeguards the presumption of innocence of defendants (46%), and ensures equal access (46%).** Hondurans were least confident that the criminal justice system **ensures timeliness (33%) and ensures uniform quality of service (40%).**
- Perceptions of adherence to **equal treatment of victims, presumption of innocence, and overall effectiveness in delivering justice** in the Honduran criminal justice system worsened the most between 2021 and 2022, all with declines of 4 percentage points.

10. Police Performance

When asked about their impressions of police performance, respondents in Central America had the most negative views on accountability and due process and the most positive views on public service and crime control, on average.

- When asked about their impressions of police performance, respondents in Honduras were most confident that:
 - Police treat all people with respect (75%).
 - Police are available to help when needed (69%).
 - Police help them feel safe (66%).
- Respondents in Honduras were least confident that:
 - Police are held accountable for violating laws (20%).
 - Police are investigated for misconduct (22%).
 - Police respect the rights of suspects (24%).
- In Honduras, respondents most often indicated that suspects with tattoos, male suspects, and younger suspects would most likely be at a disadvantage in a criminal investigation.

11. Victim Support

In almost every country surveyed in Central America, less than half of all respondents, on average, believed that victims of crime receive adequate support and protection, with the exception of El Salvador. Respondents in El Salvador reported the most confidence in victim support practices overall, while respondents in Honduras reported the least confidence in the victim support practices overall.

- Hondurans were most often confident that crime victims **are addressed by the police using accessible language (41%) and are guaranteed their rights in criminal justice proceedings (38%).**
- Hondurans were least often confident that crime victims **are believed (16%) and receive prompt and courteous attention (19%)** when reporting a crime.

SECTION 4

Access to Justice

12. Access to Justice

One in four (25%) respondents in Central America reported experiencing a legal problem in the last two years, on average. While the prevalence and severity of problems vary by country, the most common problems relate to housing and land disputes. On average, 57% of respondents in Central America reported that their legal problem has been resolved and nearly three-quarters (73%) of all settled problems were resolved within 6 months.

- Nearly one-fifth (18%) of Hondurans reported experiencing a legal problem in the last two years (a figure below the regional average of 25%). The most commonly reported problems included housing issues, land disputes, and debt resolution.
- Twenty-seven percent (27%) of surveyed Hondurans with a legal problem obtained advice from a person or organization that could help them better understand or resolve their problem, and approximately 1 in 2 (48%) reported that it was difficult or nearly impossible to find the money required to resolve their problem.
- Less than half (44%) of respondents in Honduras who resolved their legal issue experienced at least one hardship during the resolution process. The most frequently cited hardship was economic – 27% of respondents reported experiencing loss of income, employment, or the need to relocate.

SECTION 5

Migration

13. Internal Migration

On average, roughly one-quarter (26%) of respondents in Central America reported having moved within their country. Throughout the region, respondents consistently cited better economic or educational opportunities and family reasons as their primary reason for moving.

- Out of all Hondurans who migrated internally, respondents most frequently migrated to San Pedro Sula (33% of respondents) from another city in Honduras.
- Hondurans who are younger than 30 were more likely to have migrated internally within the last three years.

14. International Migration

Compared to peer respondents in Central America, Hondurans most often reported that they would like to migrate internationally, while Panamanians least often reported the same. Throughout the region, respondents consistently cited better economic or educational opportunities and less violence and corruption as their primary reasons for wanting to move. The United States was the top international migration destination for all respondents in the region. On average, 82% of respondents desiring to migrate internationally across the region have friends or family currently living in their destination country.

- Hondurans were less likely to want to move internationally in 2022 (44% of respondents) than in 2021 (49% of respondents). Compared to respondents in other cities in Honduras, respondents in La Ceiba most frequently reported wanting to move to another country (54% of respondents).

15. Migration to the United States

On average, 1 in 10 (10%) respondents in Central America have attempted to migrate to the United States. The majority of those who had attempted to migrate to the United States from Central America had traveled via plane or bus and most frequently reported that they traveled alone. On average, of those who had entered the United States, Central American respondents most often cited their reason for leaving the United States as family or social reasons (16%) or having been deported by ICE (14%). Of the Central American respondents that attempted to migrate to the United States, an average of 12% of respondents were subjected to violence and 22% were asked for a bribe.

- Sixteen percent (16%) of respondents in Honduras have attempted to migrate to the United States and just under half (42%) of those respondents successfully entered the United States before returning to Honduras.
- Fifty-six percent (56%) of respondents who reported having attempted to migrate to the United States did not end up entering the country. Of those respondents, 37% were sent back by law enforcement and 21% did not enter because they ran out of funds.

Note: In addition to the data found in regional charts included in this report, comparative data for regional peer countries referenced in the Executive Findings can be found in each country's respective report.

PROJECT DESIGN

42 Methodology

METHODOLOGY

To present an image that accurately portrays the rule of law as experienced by ordinary people, data in this report is drawn from the General Population Poll (GPP), an original data source designed and collected by the World Justice Project (WJP). The GPP captures the experiences and perceptions of ordinary citizens concerning the performance of the state and its agents and the actual operation of the legal framework in their country.

The General Population Poll used to collect data in Honduras in 2022 features several new questions that highlight perceptions on issues salient to the region, including corruption, authoritarian behaviors, police performance, criminal justice, and security. In total, the General Population Poll questionnaire includes 162 perception-based questions and 86 experience-based questions, along with sociodemographic information on all respondents. Additionally, the GPP in Honduras was administered to a sample of 2,000 respondents.

Data Collection

The GPP in Honduras was conducted for the WJP's *The Rule of Law in Honduras: Key Findings from the General Population Poll 2022* with sampling, fieldwork, and data processing by Mercaplan, based in San Pedro Sula, Honduras. Mercaplan administered the surveys between November 2022 and January 2023, conducting face-to-face interviews using a multi-stage stratified random sampling design. The target population group for this survey included Hondurans aged 18 years or older residing across 16 departments throughout the country.

SAMPLE SIZE AND SAMPLE FRAME

The General Population Poll in Honduras represents an achieved total sample size of 2,000 interviews distributed proportionally across four regions. Mercaplan based the sampling frame on 2013 and 2017 population figures from the National Statistics Institute of Honduras (INE), acquiring a proportionally stratified sample by region, age, gender, socioeconomic status, and level of urbanization.

In order to address all relevant topics while controlling the questionnaire length, the World Justice Project split three of the survey modules into two versions (Option A and Option B) and randomly assigned one option to each respondent for each module. These modules included: Hypothetical Situations, Civic Participation, and Institutional Performance. Aside from these modules, the questionnaires are identical. A link to the complete survey instrument, in English and Spanish, can be found in the Appendix of this report.

SAMPLING

Regions and departments were selected to achieve a nationally representative sample of the country based on population density and geographic coverage. In urban areas, municipalities were selected as the primary sampling unit using probability proportionate to size sampling. In rural areas, towns and villages were selected as the primary sampling unit using the same method. Individual enumeration areas consisted of neighborhood and were selected via simple random sampling. The number of interviews assigned to each enumeration area was determined based on relative population size. Within each enumeration area, survey administrators performed a systematic random route to sample households and used the Last Birthday method to select respondents. If the selected respondent declined to be interviewed or otherwise did not meet the characteristics of the target quota, the interviewer moved on to the next household. Due to a lack of accessibility, the Ocotepeque and Islas de la Bahía departments were excluded from the study. Due to security challenges, one enumeration area was split between two neighborhoods in the city of Catacamas. Both neighborhoods share the same socioeconomic characteristics.

DESCRIPTION OF THE SAMPLE

COVERAGE: Interviews were distributed across regions to create a nationally representative sample. Thirty-six percent (36%) of the interviews took place in the North Atlantic region, followed by 27% in the Central region, 20% in the Southeastern region, and 17% in the Western region.

GEOGRAPHY: Forty-six percent (46%) of respondents resided in rural areas and municipalities, while 54% of respondents resided in metro areas or cities.

RACIAL AND ETHNIC

BACKGROUND: Most (56%) respondents identified themselves as Mestizo, followed by White (17%), Afro-Honduran (8%), and Indigenous (6%).

GENDER: Forty-nine percent (49%) of respondents were female and 51% were male.

EDUCATION: Most respondents (51%) reported that they had received at least a high school diploma or vocational degree, and the remaining 49% of respondents received up to a middle school diploma.

RESPONSE RATES

Eligible household, non-interview	12,580
Refusals	7,116
Break-off	170
Non-contact	5,294

INTERVIEWING AND QUALITY CONTROL

In total, 29 interviewers worked on this project. Enumerators worked in groups with 11 supervisors overseeing the project. Interviews were conducted in Spanish.

The supervisory team directly oversaw all interviews in the field and validated 23% of all interviews in-person. During data processing, 450 interviews (approximately 23% of the sample) were selected for audio review by the central office and 410 interviews (approximately 21% of the sample) were backchecked via telephone. Additional quality control measures included geo-fencing, audio quality checks, and checks for abnormal interview length. After quality control, 90 interviews were rejected from the final sample. Interviews averaged 37 minutes in length and ranged from 30 to 45 minutes.

DATA REVIEW AND JUSTIFICATION

As part of the data analysis process, the team consulted several third-party sources in order to contextualize and validate perception-based data captured by the General Population Poll and compare it with the objective rule of law situation in-country. Peer data sources consulted include select indicators measured by the Latin American Public Opinion Project (LAPOP)'s *AmericasBarometer*, *Latinobarómetro*, *Varieties of Democracy (V-Dem)*, *Transparency International's Corruption Perceptions Index*, the Bertelsmann Stiftung's *Transformation Index (BTI)*, and Freedom House's *Freedom in the World*. While certain trends captured by the 2022 General Population Poll in Honduras are comparable to trends in perceptions data measured by other indices, the experiences and perceptions presented in this report may not always coincide with the reality of Honduras' rule of law performance as measured by other sources.

HISTORICAL DATA

Historical data in this report derives from the *WJP Rule of Law Index®*'s General Population Poll that is typically administered every two to three years using a nationally representative probability sample ranging from 500 to 1,000 respondents. These household surveys were administered in the three largest cities of most countries until 2018, when the World Justice Project transitioned to nationally representative coverage as the preferred methodology for polling. The historical polling data used in this year's reports was collected in the following intervals: Data for Belize, Costa Rica, and Honduras was collected in 2014, 2017, 2019, and 2022. Data for Panama was collected in 2014, 2017, 2019, and 2022. Data for El Salvador and Guatemala was collected in 2016, 2018, and 2022.

ADDITIONAL COUNTRIES

The Rule of Law in Honduras: Key Findings from the General Population Poll 2022 includes comparisons to the following Central American countries surveyed by the World Justice Project during the same period: Belize, Costa Rica, El Salvador, Guatemala, Nicaragua and Panama. This report is additionally part of a series that presents findings from the following five sub-regions within Latin America and the Caribbean: Andes (Bolivia, Colombia, Ecuador, Peru); Southern Cone (Argentina, Brazil, Paraguay); Eastern Caribbean (Barbados, Dominica, Grenada, St. Lucia, St. Vincent and the Grenadines, Trinidad and Tobago); Greater Antilles, The Bahamas, and the Guianas (The Bahamas, the Dominican Republic, Guyana, Haiti, Jamaica, Suriname); and Central America (Belize, Costa Rica, El Salvador, Guatemala, Honduras, Nicaragua, Panama). Together, these 26 countries are a portion of the 140 countries and jurisdictions included in the *WJP Rule of Law Index 2022* report. Detailed information regarding the methodology of the *Rule of Law Index* is available at: www.worldjusticeproject.org.

ABOUT THE WORLD JUSTICE PROJECT

The World Justice Project (WJP) is an independent, multidisciplinary organization working to create knowledge, build awareness, and stimulate action to advance the rule of law worldwide. Effective rule of law is the foundation for communities of justice, opportunity, and peace—underpinning development, accountable government, and respect for fundamental rights.

The WJP builds and supports a global, multidisciplinary movement for the rule of law through three lines of work: collecting, organizing, and analyzing original, independent rule of law data, including the World Justice Project Rule of Law Index; supporting research, scholarship, and teaching about the importance of the rule of law, its relationship to development, and effective strategies to strengthen it; and connecting and building an engaged global network of policymakers and advocates to advance the rule of law through strategic partnerships, convenings, coordinated advocacy, and support for locally led initiatives.
